

INTRODUCING OUR NEW SERVICE

ACCURATE CONCRETE CUTTING

395mm DEEP

FEATURES & BENEFITS

New High Frequency Electric Cutting

Suitable for outdoor and indoor use, operates without toxic fumes or high pressure hydraulic hose systems

Easy to Transport on Site

Can be taken up stairways, easy to manually lift into place on purpose built trolley

Track Cutting System

The cutter is mounted on modular tracks bolted to the surface to ensuring accurate straight cuts

Safe Use

Wireless remote control allows the operator to stand at a safe distance away from the cutter during operation and reduces operator fatigue

Deep Cutting

Maximum cutting depth, 395 mm from one side

Operator Protected

All blades are fully guarded which adjust with cutting depth

Flush Cutting

Can cut the base of the walls flush with the floor, no additional grinding work needed

Controlled Demolition

By cutting large structures into manageable pieces they can be either craned or manually lifted to waste without damaging surrounding assets

We have other electric diamond cutters that allow us to cut cavity corners without over-cutting, this prevents damage to the remaining reinforcing steel within the wall.
